Dušan Đuriš

Software Engineer · AI Model Evaluator

Novi Sad, Serbia · dukydjuris@gmail.com · djuris72.github.io · github.com/djuris72 · LinkedIn

PROFILE

Software engineer with hands-on experience in evaluating generative AI models and building machine learning and full-stack systems. I check model outputs for accuracy, reliability and relevance, and I understand how models are built, which helps me diagnose why they fail. Interested in LLM evaluation, benchmark task design and research quality assurance.

EXPERIENCE

AI Model Trainer & Evaluator — Labelbox (Alignerr), via Upwork

- Trained and evaluated generative AI models on a data-annotation platform.
- Reviewed model responses for reliability, accuracy and relevance.

EDUCATION

B.Sc. Software Engineering — Singidunum University

Bachelor's thesis: automatic number plate recognition (ANPR), comparing three approaches. Secondary school background in IT.

SELECTED PROJECTS

ANPR System (bachelor's thesis) · Python, PyTorch, YOLOv8, OpenCV, EasyOCR

- Compared three approaches on real-world plate data: classical CV pipeline, custom CNN classifier and fine-tuned YOLOv8 nano.

ANPR Access Control · Python, YOLOv8, Spring Boot, PostgreSQL, React, Docker

- Access control system that reads a plate from an image and allows or denies entry based on a vehicle whitelist.
- Three independent services (ML, backend, frontend) over REST, with JWT authentication and full audit logging.

Web Shop · Node.js, Express.js, MongoDB, PostgreSQL

- E-commerce app with a hybrid database design: MongoDB for catalog and price history, PostgreSQL for users and orders.

miniUpwork · Java, Spring Boot, Thymeleaf, MySQL, Spring Data JPA

- Simplified freelance marketplace with job listings and bidding, built on MVC architecture.

CNN Image Classifier · Python, PyTorch

- Convolutional neural network trained from scratch to classify images of dogs and cats.

SKILLS

Languages: Python, Java, JavaScript, HTML5, CSS3
AI / ML: PyTorch, YOLOv8, OpenCV, EasyOCR, scikit-learn, Jupyter
Backend: Spring Boot, Node.js, Express.js, REST APIs, Maven
Databases: PostgreSQL, MySQL, MongoDB, Spring Data JPA, Sequelize, Mongoose
Tools: Git, GitHub, Docker, Linux, React, Thymeleaf
Evaluation: LLM output review, fact and accuracy checking, data annotation
